

TO MAKE MORE PRECIOUS THE NATURAL ENVIROMENT

J SPECIAL SET

J SPECIAL SEAT

CENTRAL PARK

Thanks to their modular features and their flexibility J units give the possibility to create different compositions

LINEAR COMPOSITION: basket + backed seat + seat + supporting surfaces

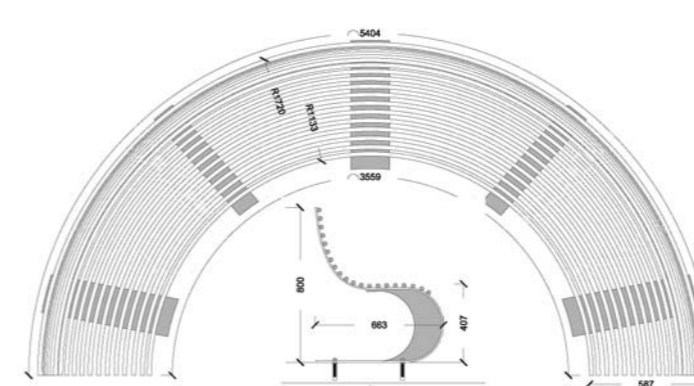

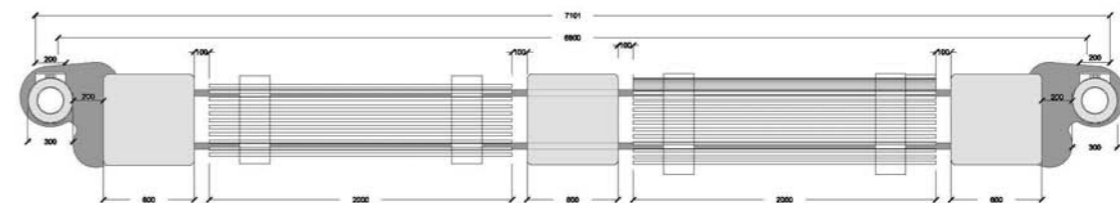

CURVED COMPOSTION: basket + backed seat + curved seat + seats + supporting surfaces

The bearing structure is composed by J curved metal plates strengthened by perpendicular semi-lunar sheets placed inside the main curve. The shaping allows to make seats with or without back as well as to insert supporting surfaces. It can be made of AISI 304 L stainless steel or of iron with the hot galvanization treatment of the finished unit and final powders painting after proper coating of primer.

The base, in the horizontal side prearranged for the positioning to the ground, can be anchored to the flooring by means of clamps to be drowned into the concrete plinths casting or by means of synthetic resin plugs and screws.

Linear Composition

2 baskets + 1 backed seat + 1 seat without back + 3 supporting surfaces.
The whole composition is made of glazed stainless steel excepting the table tops made of pral.

Curved Composition

2 baskets + 1 backed seat + 1 curved backed seat + 1 seat without back + 2 table tops.

The whole composition is made of glazed stainless steel excepting the table tops made of pral.
